

CLT Viewer for Windows

**The Internet CCTV system for
everyone.**

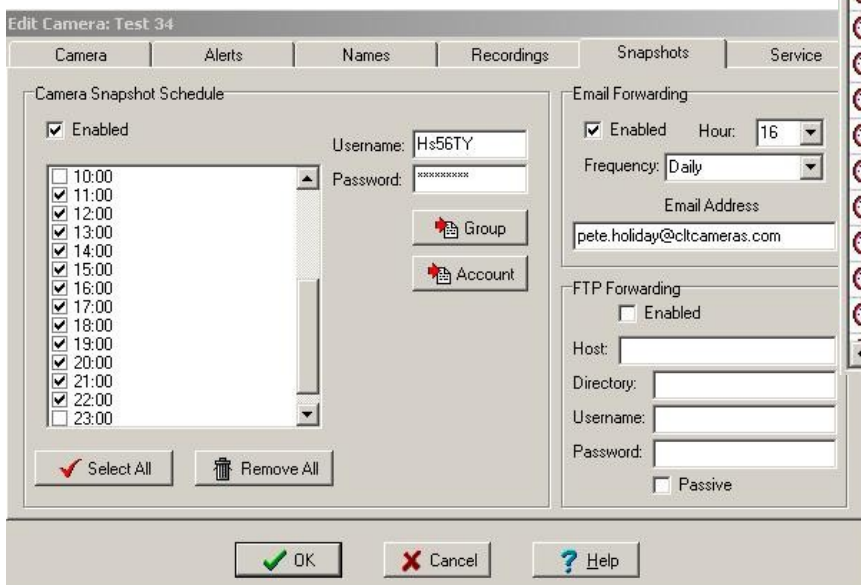

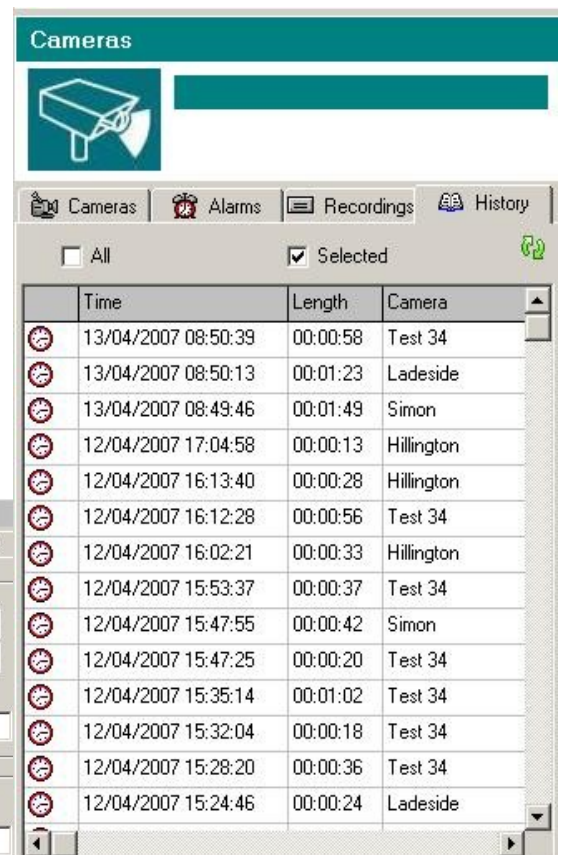

“Child's play... camera installed and viewing video at the click of a button in minutes...”

“... installing cameras is as simple as entering the supplied Security Name and Security Word.”

Our primary goal in designing CLT Viewer was to make it the simplest piece of viewing software on the CCTV market today. And, because we know how much you value there being no network setup for CLT Video Servers, it made sense that the accompanying software was designed to be just as easy to install and use.... and it is. After entering your camera security details, simply select it in the Viewable Cameras List and click the 'ON' button. To finish viewing, click the 'OFF' button.

As complicated or as simple as YOU wish...

CLT Viewer enables you to remotely program the many advanced features of CLT Video Servers. How much you use is up to you... but it goes without saying, that we have invested a lot of time in to making this programming as straightforward as possible.

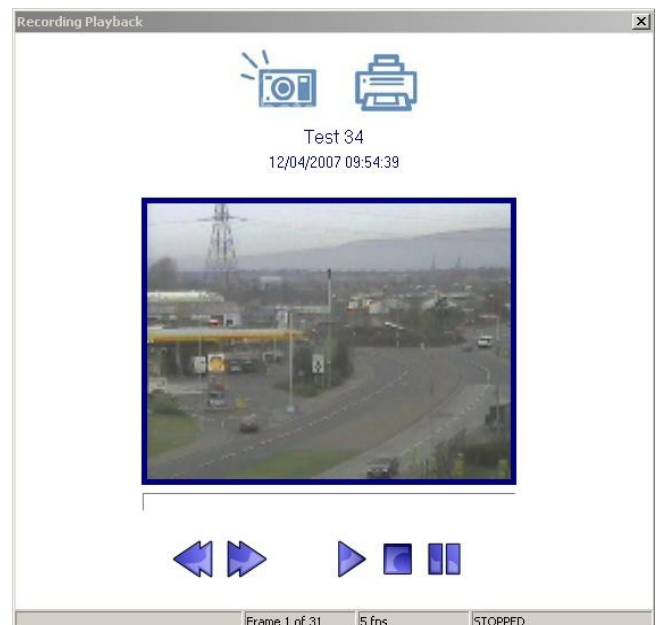

ALARM ALERTS

Receive alerts via SMS, Email or send them as CRANS to a Central Monitoring Station.

Receive notification from cameras when external alarm input is triggered. Up to 3 SMS phone numbers and 3 Email addresses may be entered per camera. CLT-II Video Servers also send Central Rapid Alarm Notifications to designated CRAN Servers run by Central Monitoring Stations. SMS notifications are subject to having a Service Account in credit.

Alarm triggered remote recording to the VVS Central Data Server for later retrieval and playback.

Remote recordings may be sent to the VVS Central Data Server upon a camera's external alarm input being triggered. The VVS Codec used in transmitting video over the Internet is encrypted, secure and optimized to produce high-quality images in exchange for frame-rate as the bandwidth decreases. (In security settings it is more important to have good quality images at a slower frame-rate than to maintain a specified frame-rate and sacrifice image quality as the bandwidth decreases.) Remote recordings are subject to having a Service Account in credit.

Peace of mind...

Keep a close watch on your most valuable assets.

...Management

Be there when you're not there.

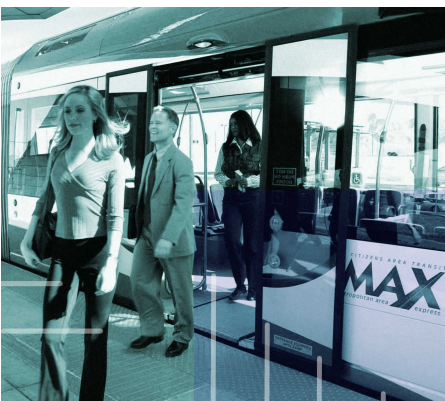

Security...

Secure your property.

...Broadcast

Promote your business on-line.

Safety...

Another pair of eyes.

Any other ideas?

Technical Specifications

CLT Video Servers	Compatible with CLT-I and CLT-II
Image Resolution	1 @ 320x 240
Zoom	Point-and Click, Digital PTZ
Frame Rate	Bandwidth dependent, up to 25fps
Video CODEC	Custom CCTV CODEC, lossless with encryption
Video channels	1
Switchable Camera Inputs	6
Remote Recording	Download and Playback
Local Recordings	None
Camera Grouping	None
Searching	None
Alarm Listings	Last 25
Recording Listings	Last 25
Snapshot Listings	Last 25
History Listings	Last 25
Required Network Setup	None
Required Display Size	1024x768
Network requirements	512 Kb or greater Internet connection
OS requirements	Windows 2000 or Windows XP
